## DETAILED ACTION

1. This final office action is responsive to amendment filed on 08/25/2006. Claims 1-24 are pending in this office action.

### *Response to Arguments*

Applicant's arguments have been considered and the new search found the prior arts as resulting of following rejection.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-15, 17,18,20-24 are rejected under 35 U.S.C. 102(e) as being unpatentable over the prior art of Cassell et al., Pub. No. 20050114593.

**Regarding claim 1:** The prior art teaches a method comprising:

defining first attributes for a plurality of threads within said integrated circuit, each of the plurality of threads comprising a concurrent execution unit (paragraphs [0045], [0063]);

defining second attributes for a memory associated with said integrated circuit for storing messages to be operated on by the plurality of threads (paragraphs [0040], [0063]);

defining third attributes for an interconnection topology associated with said memory and said plurality of threads (paragraphs [0033], [0040]); and

defining fourth attributes for an interface to said memory and said plurality of threads (paragraphs [0033], [0040],[0045]);.

**Regarding claims 2,3:** The prior art teaches a method with functional attributes and architectural attributes. (Figure 4)).

**Regarding claims 4,5:** The prior art teaches a method with program codes (paragraph [0015]).

**Regarding claim 6:** The prior art teaches a method with descriptions (paragraph [0018]).

**Regarding claim 7:** The prior art teaches a method with XML (interface program control) (paragraph [0014]).

The remaining claims of 102(e) section contain features similar to the rejection of above claims and rejected in the rationale.

#### ***Allowable Subject Matter***

Claims 16,19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The reason for allowance is that the prior art of record does not teach the dependent claims with all other features of corresponding independent claims.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
